

Problem Solution Fit

Date	01 October 2026
Team ID	SWTID-2026-8742
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	5 Marks

Problem-Solution Fit Canvas

1. CUSTOMER SEGMENT(S) [CS]

- ServiceNow Incident users
- ServiceNow administrators
- ServiceNow developers/configuration users
- Teams responsible for managing Incident records

2. PROBLEMS / PAINS + ITS FREQUENCY [PR]

- Important Incident fields may not be controlled according to Impact.
- Urgency may need to be updated manually.
- High Impact Incidents may be submitted without an Assigned To user.
- Users may attempt to change State directly from the Incident list.
- These issues can occur during regular Incident creation and updating.

3. TRIGGERS TO ACT [TR]

- User selects **High** in the Impact field.
- User attempts to submit a High Impact Incident without Assigned To.
- User attempts to edit State directly from the Incident list.
- Administrator identifies a need for better Incident field control.

4. EMOTIONS BEFORE / AFTER [EM]

Before:

- Uncertain
- Confused
- Concerned about incorrect Incident information

After:

- Guided
- Confident
- Assured that validation and field controls are applied

5. AVAILABLE SOLUTIONS – PROS & CONS [AS]**Available solutions:**

- Manual checking of Incident fields
- Standard ServiceNow Incident form behaviour
- Manual validation by users or administrators

Pros:

- Simple to use
- Requires no additional external tools

Cons:

- Depends heavily on manual checking
- Can allow incomplete or incorrect information
- Does not automatically control fields based on conditions

6. CUSTOMER LIMITATIONS [CL]

- Users must have appropriate ServiceNow access.
- Configuration requires administrator/developer permissions.
- Solution operates within the ServiceNow platform.
- Users require access to a ServiceNow-supported browser and instance.

7. BEHAVIOR + ITS INTENSITY [BE]

- Users enter and update Incident information regularly.
- Users select Impact, Urgency, Assigned To, and State values.
- Users may submit Incidents without completing all important information.
- Users may attempt to modify State directly from the Incident list.

Intensity: Medium to High during Incident creation and management.

8. CHANNELS OF BEHAVIOR [CH]**ONLINE:**

- ServiceNow Incident form
- ServiceNow Incident list
- ServiceNow platform

OFFLINE:

- Not applicable

9. PROBLEM ROOT / CAUSE [RC]

- Lack of dynamic field control.
- Dependence on manual validation.
- No automatic relationship between Impact and Urgency.
- Insufficient validation before Incident submission.
- Direct list editing can allow unwanted State changes.

10. YOUR SOLUTION [SL]

Implement **Client Scripts and UI Policies on the ServiceNow Incident table** to provide:

- High Impact Control UI Policy
- Urgency field control
- Automatic Urgency update when Impact is High
- Assigned To validation before submission
- Prevention of direct State changes through list editing
- Reverse behaviour when UI Policy conditions are no longer satisfied

Overall solution: Improve Incident data consistency and user interaction through dynamic field control, automatic updates, validation, and controlled Incident modifications.
