Team ID	SWTID-2026-8742
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	5 Marks

PROJECT PROPOSAL (PROPOSED SOLUTION) REPORT

The proposed project focuses on improving Incident management in the ServiceNow platform by implementing **Client Scripts and UI Policies**. The solution provides dynamic field control, automatic field updates, validation during Incident submission, and controlled State modification. It aims to improve Incident data consistency and reduce incorrect or incomplete Incident submissions.

PROJECT OVERVIEW

Objective

The primary objective is to implement Client Scripts and UI Policies on the ServiceNow Incident table to provide dynamic field behaviour, automatic updates, validation, and controlled Incident modifications.

Scope

The project covers the configuration and testing of UI Policies and Client Scripts for ServiceNow Incident records. It includes controlling fields based on Impact, automatically updating Urgency, validating Assigned To, and preventing direct State changes through list editing.

PROBLEM STATEMENT

Description

Incident users may enter incomplete or inconsistent information when creating or updating Incident records. Important fields may require conditional control, some values may need to be updated automatically, and unwanted changes may be made through direct list editing.

Impact

These issues can result in incomplete Incident records, incorrect field values, and inconsistent Incident management. Applying UI Policies and Client Scripts can provide appropriate controls and validation during Incident processing.

PROPOSED SOLUTION

Approach

The solution uses **ServiceNow UI Policies and Client Scripts** on the Incident table to dynamically control fields and validate user actions.

Key Features

- High Impact Control UI Policy.
- UI Policy Action to control the Urgency field.
- onChange Client Script to automatically set Urgency when Impact is High.
- onSubmit Client Script to prevent submission when Assigned To is missing for a High Impact Incident.
- onCellEdit Client Script to prevent direct State changes through Incident list editing.
- Testing of the implemented configurations under different conditions.

RESOURCE REQUIREMENTS

Resource Type	Description	Specification / Allocation
Hardware	Computer/Laptop	Intel i3 or equivalent
Memory	RAM	Minimum 4 GB
Storage	Available storage	Minimum 10 GB
Software	ServiceNow Platform	Personal Developer Instance (PDI)
Programming Language	Client-side scripting	JavaScript
Browser	Web browser	Google Chrome / Microsoft Edge / Firefox
Development Environment	ServiceNow development environment	ServiceNow Personal Developer Instance
Database	Data storage	ServiceNow Database
Tools	Configuration tools	ServiceNow Client Scripts and UI Policies
